Vault Solutions Enhancements for Compliance Accelerator/Discovery Accelerator

part of the Archive Accelerator Software Suite

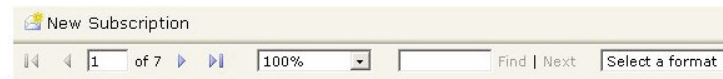

Compliance Accelerator Junk Mail Filter

When reviewing messages using Symantec's Compliance Accelerator product, it is important to narrow in on the most relevant messages. Often, routine 'junk mail' messages show up in the review list. Vault Solutions has developed an inovative, easy to manage way to filter out these routine messages. This filter allows the reviewers to decide when a message, such as a newsletter from a financial news organization, represents a typical message that does not need to be reviewed in the future. No IT involyment is required in managing which messages are filtered.

Features

- * Managed by Compliance personel.
- * Low overhead.
- * Requires no additional hardware.
- * Report shows number of messages filtered.
- * Works with all version of Compliance Accelerator since Version 7.0.

Compliance Accelerator Duplicate Mail Filter

Mail Deduplication Statistics By Message Submit Date

Message Submit Date: 01/25/2010

EVServer Name	Total	Duplicate	Not Duplicate	Percent Duplicates
NJ09MSG109	16188	8094	8094	50.00%
NJ09MSG116	204891	37753	167138	18.43%
NJ09MSG117	235602	62753	172849	26.64%
NJ09MSG118	200005	50634	149371	25.32%
ny01msg101	123892	41344	82548	33.37%

The patent-pending Duplicate Mail Filter for Symantec's Enterprise Vault eliminates duplicate messages from the review cycle in Compliance Accelerator.

Symantec's Compliance Accelerator is used to review a sample of message to comply with various regulatory requirements. These messages are pulled from Exchange journal mailboxes. Depending on the configuration of

Exchange and Enterprise Vault, it is very common for duplicate messages to appear in the Enterprise Vault Archive. For storage purposes, these are 'de-duplicated' by Enterprise Vault, but because each copy is indexed, duplicate copies often show up in the Compliance Accelerator review set.

The Duplicate Mail Filter identifies these duplicate messages as they are journaled, and tags them in Enterprise Vault in such a way that Compliance Accelerator filters them out of the review set. This, along with the junk mail filter, provides Compliance officers with a much more relevant set of messages to review. As with the junk-mail filter, this filter does not require additional hardware, and is extremely efficient.

A report is provided showing the percent of duplicate messages filtered per server.
