Vault Solutions Export

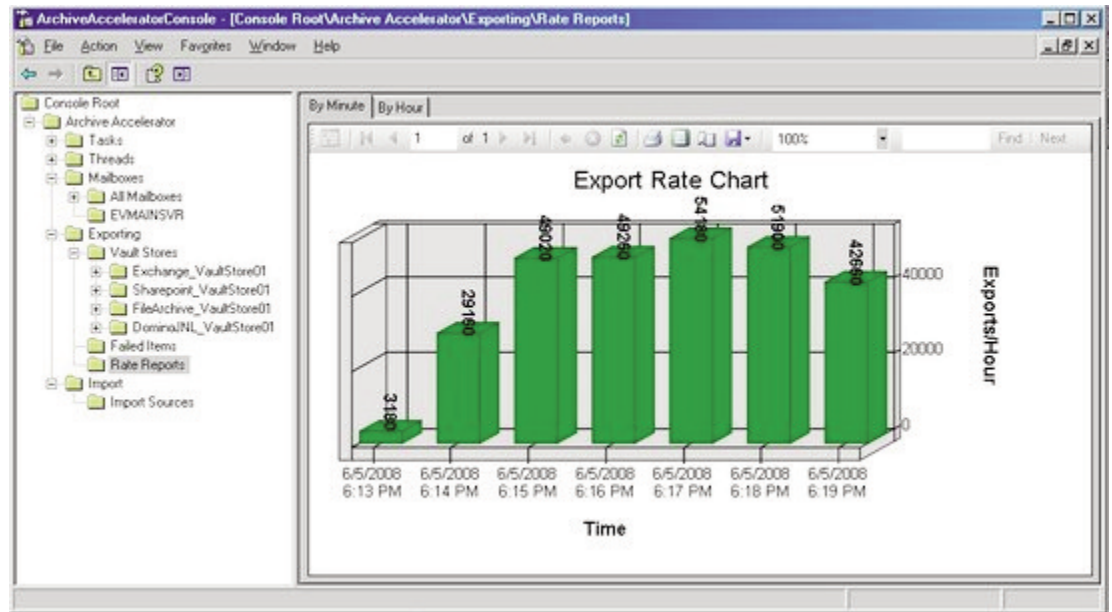

part of the Archive Accelerator Software Suite

This feature of Archive Accelerator provides fast, robust mass export of data from Enterprise Vault archives.

Features

This Add-in can be used when data needs to be:

- * Exported to a third party for analysis.
- * Taken off-line for long term archival.
- * Preserved in a non-proprietary format.
- * Migrated to a separate archive.

Any failed items are reported on, and can be retried again. The entire process is managed through a Management Console interface. Graphs showing export rates by the hour and minute are provided.

This process exports data along with key attribute information which is stored in XML format. The export process is multi-threaded and can be scheduled to run during certain hours. It is designed to scale to support export of billions of items
