VAULT SOLUTIONS

Archive Accelerator Import
For Veritas Enterprise Vault™

As one of the market's most powerful solutions for e-mail and content archiving, Veritas Enterprise Vault™ helps customers worldwide better manage, store and discover the value of unstructured content.

At Vault Solutions, we offer a range of solutions to ensure customers get the most out of their Enterprise Vault deployments.

The Vault Solutions Archive Accelerator Import provides a fast and robust way to import mass amounts of data into Veritas Enterprise Vault™.

As a member of the Veritas Technology Partner Program (VTPP), Vault Solutions has developed a snap-in mechanism allowing any source of data to be imported, including:

- EML
- MSG
- EV.Cloud
- Discovery Accelerator
- Unix/Linux via NFS
- Others via Custom Interface

We process all imports via a simple to use Windows service, controlled via the Microsoft Management Console. The database tracks and records all imports and items that fail – for easy re-processing.

The Importer is typically installed on an Enterprise Vault Server – meaning no requirement for new hardware.

Key Features:

No Additional Hardware

No Impact to e-Mail Servers

Performs Alongside Compliance Accelerator/Discovery Accelerator/ Clearwell e-Discovery

Multi-Threaded Architecture

Unattended Scheduling

Complete Audit Trails
