Enterprise Vault was one of the first applications to add native support for EMC Centera™ - a popular option for storing archived information. As more customers begin to implement policies to expire data, there is often an accompanying need to change the retention on the items stored in Centera. Sometimes Enterprise Vault was configured to not set the retention on the Centera, when it should have been set. In other cases, Enterprise Vault may have been configured to set the retention on the Centera, but the business has since adjusted the retention period. The retention on the Centera needs to be updated if the items are to be expired properly via the policy.

Changing item retention can create a range of challenges if Centera is a Governance Edition model or a Compliance Edition Plus model.

For Centera Governance Edition, Archive Accelerator Centera Retention Manager leverages the EMC Centera "Audited Delete" feature to change retention of items already placed on Centera. There's no need for data to be re-archived or re-indexed - and information isn't required to be moved on or off Centera. It is possible to adjust the retention longer or shorter in this case.

For Centera Compliance Edition Plus, it is not possible to reduce the retention time, but it is possible to increase the retention. This can be very important to ensure items are not accidently or maliciously deleted from the Centera.

Whether you didn't set the retention on the Centera at all, or have since adjusted your retention policy, using Archive Accelerator Centera Retention Manager can help insure you are in compliance.
