

Archive Accelerator Restore For Veritas™ Enterprise Vault

Veritas Enterprise Vault™ is one of the most powerful platforms for e-mail and content archiving.

When customers require flexibility in restoring messages back to a user's mailbox, they turn to Vault Solutions LLC's Archive Accelerator Restore.

The restore feature built into Enterprise Vault typically returns all items, including items that correspond to deleted shortcuts and unwanted messages to the mailboxes. Archive Accelerator Restore empowers administrators to restore all items easily and quickly or just those with having shortcuts in the mailbox.

Its unattended mode allows you to schedule multiple concurrent restores at convenient times, such as evenings or on weekends. Included is the ability to restore items for which there are no shortcuts in the mailbox. Archive Accelerator Restore runs multi-process multi-threaded for enhanced throughput.

The restoration process is managed by administrators via the Archive Accelerator Management Console.

Targets include Exchange Mailboxes, Exchange Personal Archives, Exchange Online Mailboxes and Online archives, and Google Apps for Business. Archive Accelerator also has the unique ability to migrate journal archived data to Google Apps with Vault or to Exchange Online.

The solution is capable of processing multiple mailboxes simultaneously per server. Multiple servers can be used with automatic load-balancing.

Archive Accelerator can typically process up to 400,000 messages per hour!

Key Features:

Option to restore all items or only those with mailbox shortcuts

Restores to multiple mailboxes simultaneously

Can restore directly to Exchange Online

Direct Migration for industry leading performance

Complete audit trail for purposes of chain of custody

Supports modern authentication
