Vault Solutions' Archive Accelerator Import provides a fast and robust way to import mass amounts of data into one of the market's most powerful solutions for e-mail and content archiving - Enterprise Vault™.

We offer a range of solutions to ensure customers get the most out of their Enterprise Vault deployments, helping them better manage, store, and discover the value of unstructured content.
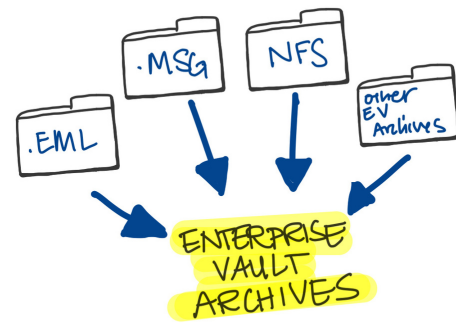

As a Veritas Technology Partner, Vault Solutions has developed a snap-in mechanism allowing any source of data to be imported, including:

- EML
- MSG
- Unix/Linux via NFS
- Enterprise Vault Archives
- Veritas Alta™ Archiving (EV.Cloud) Exported Data

We process all imports via a simple to use Windows service, controlled via the Microsoft Management Console. The database tracks and records all imports and items that fail – for easy re-processing.

The Vault Solutions Importer can be used to immediately start importing data from a data source, or can import data on a schedule. It keeps chain of custody information about all items imported and keeps track of what has been imported to insure against re-importing the same data twice.

Now that's Unstructured Content made easy!

Key Features:

No impact to email servers

Performs Alongside Compliance Accelerator and the eDiscovery Platform

Multi-Threaded Architecture

Unattended Scheduling

Complete Audit Trails
